

Lab-4 Ex1 - Types of Character (*PreLab)

This is a PreLab exercise. Please do the PreLabs after each lecture and before you come to lab!

In the lecture, you have learned the character data type and ASCII table. Your friend would like you to write a simple program to determine the input character belong to

1. number,
2. small letter,
3. capital letter, or
4. others.

Please follow the following **pseudocode** to complete the program:

Obtain input character

Check input is a number or not, and output correspondingly

Check input is a small letter or not, and output correspondingly

Check input is a capital letter or not, and output correspondingly

Output the remaining situation, i.e. not an alphanumeric letter

Input:

A single character in the first line.

Output

First line: "You have entered <input character>."

Second line, either one of the following:

- '<input character>' is a number.
- '<input character>' is a small letter.
- '<input character>' is a capital letter.
- '<input character>' is not an alphanumeric letter.

User-input integers are ***bold and italic*** in the following sample runs.

Sample Run #1:

a

You have entered 'a'.

'a' is a small letter.

Sample Run #2:

?

You have entered '?'.

'?' is not an alphanumeric letter.

Sample Run #3:

3

You have entered '3'.

'3' is a number.

Sample Run #4:

G

You have entered 'G'.

'G' is a capital letter.
