

Lab-7 Ex3 - Hollow Square (Prelab*)

Let's write a program to draw a hollow square.

Ask the user for height of the hollow square, and the program shall draw it accordingly. You are not required to verify the input range, but you can assume the height will be *at least 3* and *at most 10*.

User-input numbers are *bold and italic* in the following sample runs.

Sample run #1:

3
