

Lab-13 Ex8 - Writing a File

A file of numbers is given as **numbers.txt**. There are 3 integers on every line and there are 9 lines. We would like to print the average of the numbers in the lines requested by the user, from *start* to *end* inclusively. The results (4 decimal places) are written to **output.txt**, separated by newline characters. The file starts on **line 1**.

User-input numbers are ***bold and italic*** in the following sample runs.

Sample run #1

Start? ***1***

End? ***1***

Sample of 'output.txt' #1

31.3333

Sample run #2

Start? ***1***

End? ***4***

Sample of 'output.txt' #2

31.3333

29.3333

21.0000

17.6667
