

Lab-2 Ex1 - A More Sophisticated Hello World (PreLab*)

As a university student, the Hello World program in previous exercises could be too simple for your taste. Now challenge yourself and write a more sophisticated Hello World!

Write a C program to print the following message into the output window. The sample output is shown as follows.

```
I'm a [CUHK Engineering] student.  
Hello everybody in {ENGG1110}!  
Let's solve problems by programming in C.  
Who am I?  
This is ell 'l'  
This is Ell 'L'  
This is one '1'  
This is vertical stroke '|'  
This is ohh 'o'  
This is Ohh 'O'  
This is zero '0'  
I'm cute 'Q'
```

IMPORTANT: Again, the output format (spelling, letter case, punctuation's, and even spaces) of your program has to **strictly follow the sample output**.
