

Lab-3 Ex3 - Typhoon Warning Signal

In this exercise, you need to classify the tropical cyclone (already centered within 800 km of Hong Kong) according to the continuous wind speed input with one decimal place, as in this table.

Continuous Wind Speed	Tropical Cyclone Warning Signal	Tropical Cyclone Warning Symbol
Below 41.5	1	 T 1
From 41.5 to less than 62.5	3	 L 3
From 62.5 to less than 117.5	8	 A 8
117.5 or above	10	 P 10

In this exercise, all the input and output values are assumed to have **one decimal place only**. After the user input the *wind speed*, the program will display the corresponding *Tropical Cyclone Warning Signal* as follows. You may assume the input is always positive.

User-input numbers are ***bold and italic*** in the following sample runs.

Sample run #1:

180.0

Continuous Wind Speed of 180.0 => Tropical Cyclone Warning Signal No 10

Sample run #2:

62.5

Continuous Wind Speed of 62.5 => Tropical Cyclone Warning Signal No 8

Sample run #3:

43.9

Continuous Wind Speed of 43.9 => Tropical Cyclone Warning Signal No 3
