

Lab-9 Ex1 - Revision - Selection Sort (Prelab*)

This is a PreLab exercise. Please do the PreLabs after each lecture and submit before you come to lab!

Here we have a template for a Selection Sort function for an array of integers.

```
void SelectionSort(int input[], int size) {  
    // Insert your code here  
}
```

Do you remember what is the Selection Sort? We have learned about it in Lecture Notes 07, Looping (III).

Please finish the function so that the array of integers will be sorted in ascending order. Copying from the lecture slides may sometimes lead to invalid characters, so please be careful. Do NOT change the `main()` function!

User-input numbers are ***bold and italic*** in the following sample runs.

Sample run #1

6 4 5 1 2 3 8 7

1 2 3 4 5 6 7 8

Sample run #2

1 2 3 4 5 6 7 8

1 2 3 4 5 6 7 8

Sample run #3

9 3 9 9 2 1 5 4

1 2 3 4 5 9 9 9
