

Lab-9 Ex2 - Revision on 2D array (Prelab*)

This is a PreLab exercise. Please do the PreLabs after each lecture and submit before you come to lab!

Compute and print the row sums and column sums of a given 2D array of integer elements. Number of rows and columns shall be within 1 to 10. No input validation is required.

User Input:

- The first line contains two numbers, indicating the number of rows and the number of columns of the 2D array respectively.
- Then, the row x column 2D array is supplied.

Program Output: Output your answers in the following format:

```
Row sums:
<number>
<number>
...
Column sums:
<number> <number> ...
```

Pay attention: No extra space after the last number in column sums.

Sample Output

```
4 5
1 2 3 4 5
6 7 8 9 0
-1 -2 -3 -4 -5
-9 -9 9 -9 9
```

```
Row sums:
15
30
-15
-9

Column sums:
-3 -2 17 0 9
```
